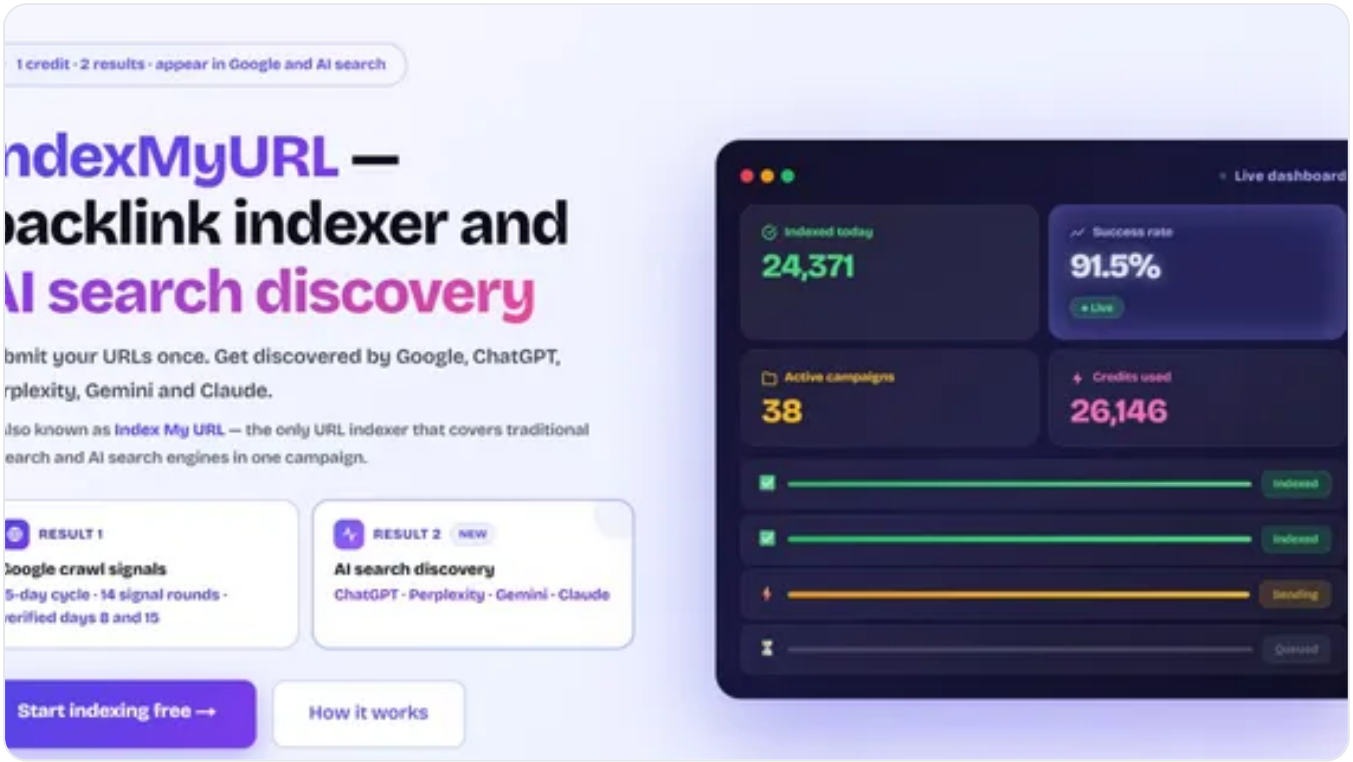
IndexMyURL

Backlink indexer and link indexing service for Google and AI search engines with pay-as-you-go credits.



About

IndexMyURL is a backlink indexer built to help URLs get discovered by Google and AI search engines. It sends each submission through multiple discovery paths, including Google crawl signals, Bing IndexNow, PerplexityBot routes, and Brave Search submission, so one campaign can support search visibility across several systems at once. The service uses credits instead of a subscription, includes 10 free credits, and says credits never expire. It also offers an auto refund if nothing is indexed within 15 days.

What is IndexMyURL?

IndexMyURL is a backlink indexer and AI search discovery service for people who want URLs to be found more quickly by Google, ChatGPT, Perplexity, Gemini, and Claude. The site positions itself as a link indexing service rather than a general SEO suite, and its main job is to push submitted URLs through several discovery channels in parallel.

The core pitch is simple: submit URLs once, spend one credit per URL, and let the service handle the indexing workflow. IndexMyURL also describes itself as a “link indexing service” with 4 discovery channels running at the same time, which makes it more specific than a standard backlink indexer focused only on search engines.

Key features

IndexMyURL centers on a small set of concrete features that matter to anyone using a backlink indexer:

- **Four discovery channels in parallel:** the service says each campaign can trigger Google crawl signals, Bing IndexNow, PerplexityBot discovery paths, and Brave Search submission.
- **AI search discovery:** it is designed not only for Google but also for ChatGPT, Perplexity, Gemini, and Claude.
- **Pay-as-you-go pricing:** there is no subscription mentioned, only credits.
- **10 free credits:** new users get a small starter balance to test the backlink indexer before paying.
- **Credits never expire:** unused credits can be kept for later campaigns.
- **Auto refund in 15 days:** the site says refunds happen automatically if the campaign does not index within the stated window.
- **Large campaign capacity:** the interface mentions support for up to 10,000 URLs per campaign, with CSV, sitemap, and RSS inputs.
- **Live reporting:** the dashboard shows active campaigns, credits used, indexed today, success rate, and status labels like queued, sending, and indexed.

The service also publishes live figures on its homepage, including a success rate, indexed counts, and active campaign totals, which suggests the backlink indexer is meant to be monitored while it runs.

Using IndexMyURL appears straightforward and campaign-based, which is typical for a backlink indexer.

- **Create a campaign** and start from the free credits or purchase more credits if needed.
- **Add URLs** one by one or import them through supported formats such as CSV, sitemap, or RSS.
- **Submit the campaign** so the system can begin its discovery process across the listed channels.
- **Watch the dashboard** for statuses like queued, sending, and indexed.
- **Review the result window** over the 15-day cycle, since the site references verified days 8 and 15 for its Google crawl-signal process.
- **Use the refund flow automatically** if the campaign does not meet the stated indexing conditions inside the 15-day period.

For users who manage many pages, the backlink indexer model is practical because the same workflow can cover a batch of URLs rather than forcing a manual submit-one-by-one routine.

Who it is for

IndexMyURL is best suited to users who already care about indexing, crawl visibility, and AI search discovery. That includes:

- SEO freelancers who need a backlink indexer for client campaigns
- Website owners trying to get new pages discovered faster
- Growth teams that want URLs surfaced across Google and AI assistants
- Publishers with lots of pages, citations, or backlinks to process
- Marketers who prefer a credit-based backlink indexer over a monthly plan

It may also appeal to users who want to test AI search discovery without committing to a recurring fee, since the free credits and no-subscription model reduce the upfront barrier.

What to know before you use it

Google or AI search results.

A few limits are worth keeping in mind:

- **Indexing is not the same as ranking.** A URL may be discovered without earning strong search visibility.
- **Results can vary by engine.** Google, Bing IndexNow, Perplexity, Brave Search, and AI assistants do not all process URLs the same way.
- **The service describes a 15-day cycle.** If your workflow needs same-day indexing or mission-critical publication timing, you should plan for that delay.
- **Use official tools when accuracy matters.** For Google-specific coverage, Bing-specific indexing, or platform-level verification, official webmaster tools should still be part of your process.
- **Campaign-based indexing has constraints.** The service mentions up to 10,000 URLs per campaign, so very large libraries may need to be split up.

In short, IndexMyURL is a backlink indexer for people who want faster discovery across Google and AI search systems, with credits, batch uploads, and a refund window built into the process. If you need a credit-based backlink indexer that emphasizes discovery signals instead of subscriptions, IndexMyURL is worth a look, but you should still validate important URLs with official search tools.
